

**2.7.1. Student Satisfaction Survey (SSS) on overall institutional performance (Institution may design its own questionnaire) (results and details need to be provided as a weblink)**

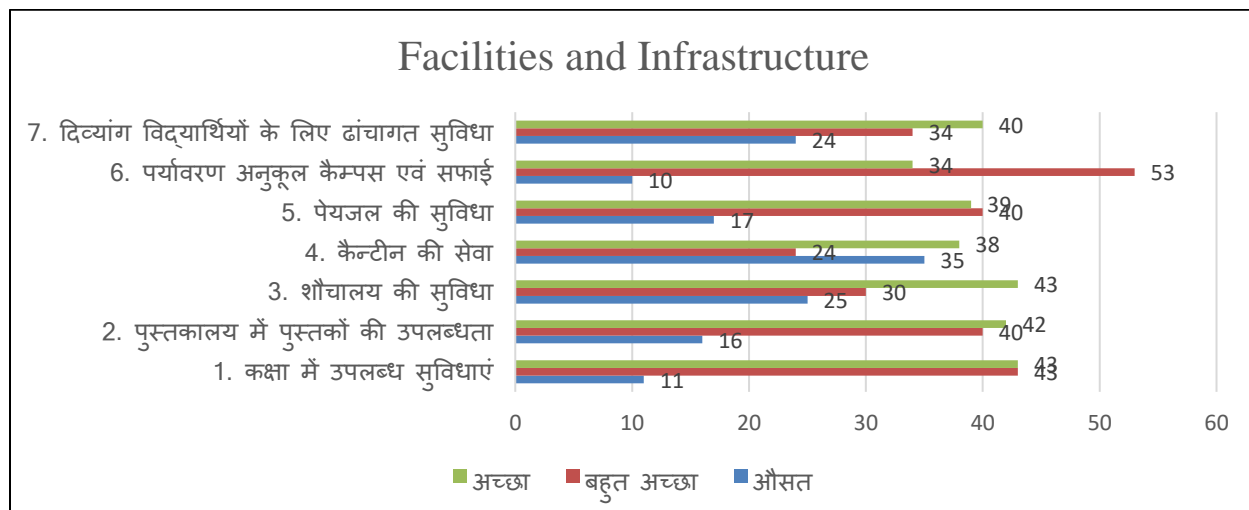

**SSS Feedback Analysis 2020-21**

**1. Teaching –Learning Process-**

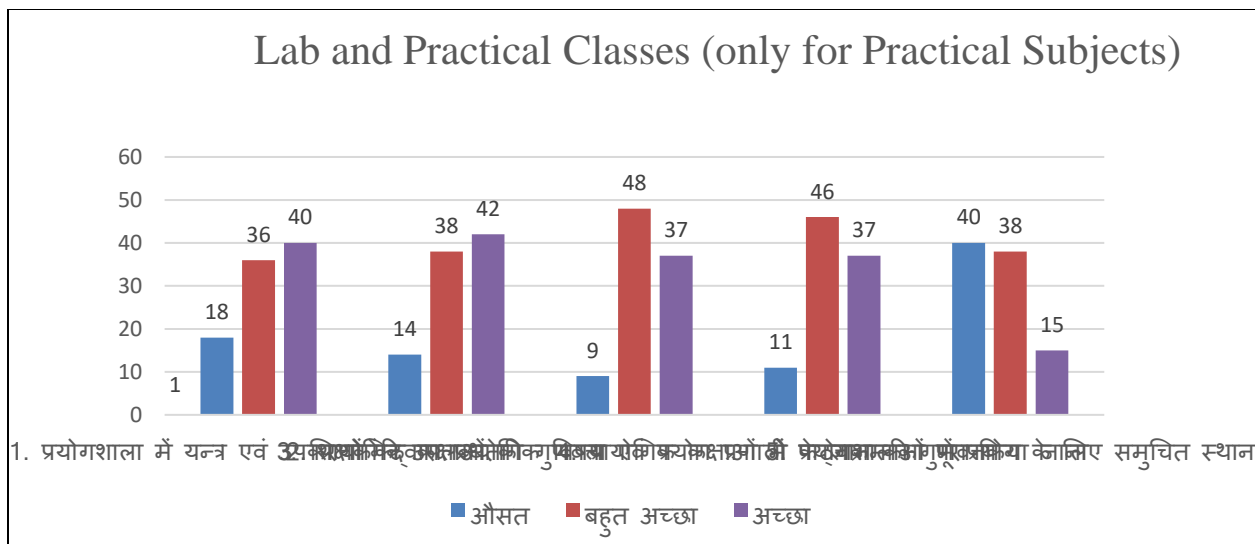

In teaching learning process students responded to 10 questions which are shown in the diagram. The X-axis shows the percentage of responses and Y axis shows the questions on which responses were given. It can be seen from the above diagram that around 70% responded to very good in 3 questions (quest. 1, 3 and 4). While in quest. 6 and 10 the students response to very good was below 50% which is our area of concern and need attention and improvement.

## 2. Facilities and Infrastructure:

In Facilities and Infrastructural dimension students responded to 7 questions which are shown in the diagram. The X-axis shows the percentage of responses and Y axis shows the questions on which responses were given. It can be seen from the above diagram that around 25% students has given us good on the dimensions of canteen, toilet and facilities for divyaang students. Thus these are area of concern for us. Where as around 45% students has voted us very good on the dimensions of cleanliness, library, classroom and drinking water facilities. So these are our strong areas but we have to improve in these areas also.

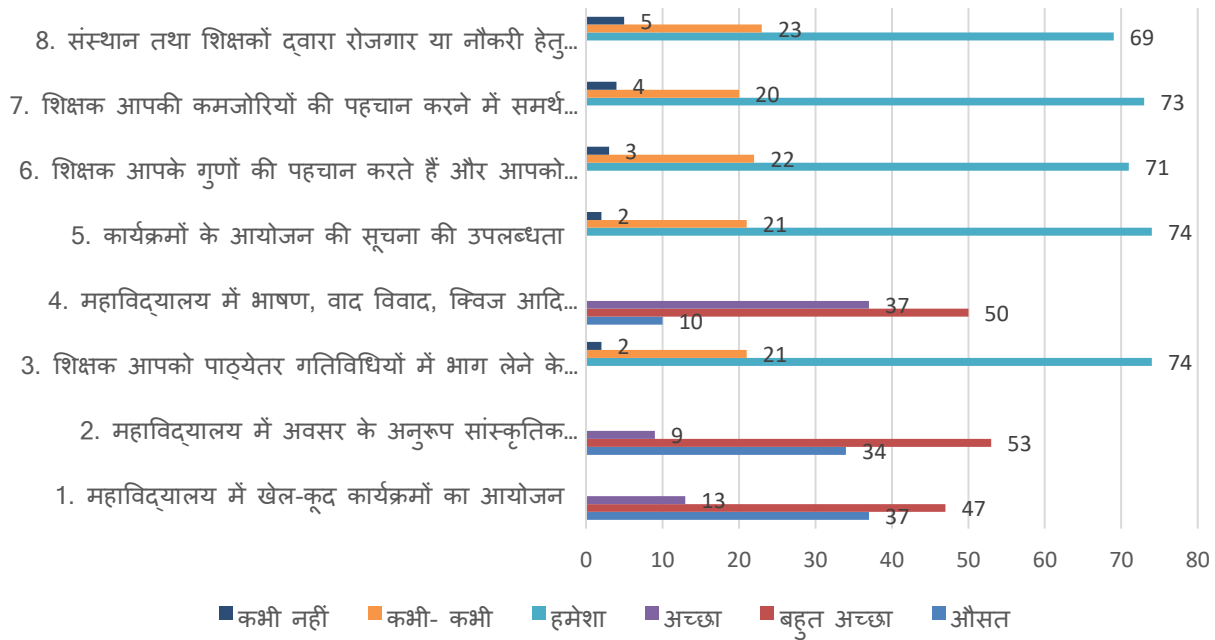

## 3. Lab and Practical Classes (Only for Practical Subjects)

In teaching learning process students responded to 5 questions which are shown in the diagram. The X-axis shows the percentage of responses and Y axis shows the questions on which responses were given. It can be seen from the above diagram that maximum students responded to good and average category to lab facilities like availability of lab equipments and instruments, quality and space of laboratories. However to dimension related to teachers knowledge on practical subjects and their ability to complete the syllabus were appreciated (very good) by maximum of the students. Thus the concern area needs improvement and upgradation in near future.

#### 4. Extra Curricular Activities:

## Extra-Curricular Activities

In teaching learning process students responded to 8 questions which are shown in the diagram. The X-axis shows the percentage of responses and Y axis shows the questions on which responses were given. It can be seen from the above diagram that maximum of students responded very good and always to all the dimensions. This may be attributed to the fact that the college has a very active cultural and sports committee.
